PROFILE

I am a Software Engineering student with a background in Mathematics and physics. I have over six years of working experience across education, field data collection, and civic service. My work has taken me from secondary school classrooms to smallholder farming communities in the Mt. Kenya region, and into the operations of a national election. In each of those settings I have had to be organized, accurate, and dependable, I carry these qualities into every role.

WORK EXPERIENCE

Mathematics & Physics Teacher

[Jan 2024] – [Nov 2024]

Garden Estate Secondary School | Nairobi

- Taught Mathematics and Physics at secondary level, covering the full curriculum for my assigned streams and preparing students for national examinations
- Introduced digital tools into science lessons to move away from purely textbook-based delivery — I wanted students to engage with content, not just memorize it
- Designed the school timetable from scratch each term, working out how to fit together all teachers, subjects, classrooms, and streams without conflicts
- Mentored students who participated in Science Congress competitions, guiding them through choosing a research question, designing their projects, and presenting findings in front of judges
- Maintained regular communication with parents and school management about student progress, particularly for learners who needed extra attention
- Monitored my own lesson delivery and kept records of student participation and performance to inform how I planned future lessons

Data Enumerator

[May 2018] – [May 2023]

One Acre Fund | Mt. Kenya Region

- Collected socio-economic and agricultural data from more than 1,000 smallholder farmers across the Mt. Kenya region over a period of three years
- Maintained an 86 percent data accuracy rate by validating entries carefully before submission and cross-checking records in the field
- Used KoboCollect and ODK on mobile devices to capture and upload data, and submitted daily field reports to supervisors throughout every assignment
- Identified problems in the field — whether data quality issues, logistical difficulties, or risks to the programme — and escalated them quickly while keeping all participant information confidential
- Managed several concurrent field assignments at different sites, planning my own movement and schedule to meet deadlines

Voter Registration Clerk & Returning Officer

April 2017 & April 2022

Independent Electoral and Boundaries Commission (IEBC) | Kenya

- Handled biometric voter registration, capturing data and verifying identification documents with a 100 percent accuracy requirement — there was no room for error in this role
- Served as Returning Officer at a polling station, coordinating party agents, polling clerks, and members of the public while maintaining order and transparency throughout the process
- Trained junior polling staff on correct procedures and supervised their work to ensure compliance
- Managed sensitive voter information every day and understood clearly what the consequences of any breach would be — confidentiality was taken seriously

EDUCATION

Bachelor of Education (BEd) — Mathematics and Physics
Catholic University of Eastern Africa

2023

Diploma in Software Engineering
Zetech University, Kenya

Expected-Nov 2026

TECHNICAL SKILLS

Programming & Development

▸ Python	▸ JavaScript	▸ C / C++
▸ React	▸ Firebase	▸ Tailwind CSS
▸ Git & version control	▸ HTML / CSS	▸ REST APIs

Data & Analysis

▸ Pandas & NumPy	▸ Matplotlib	▸ Jupyter Notebook
▸ KoboCollect	▸ ODK	▸ Excel / Google Sheets

Networking & Infrastructure

▸ Cisco CCNA	▸ LAN configuration	▸ ACLs & network security
▸ Device troubleshooting	▸ Connectivity diagnosis	

PROJECTS

ROE Expense Tracker

Personal Project | Web Application

- Built a full-stack expense tracking system with budgeting, analytics, monthly summaries, and CSV export using React and Firebase
- Added dark mode, responsive design, and data visualization components — the kind of polish that makes a tool people actually want to use

School Timetable Management System

Personal Project | Progressive Web App

- Developed a PWA that generates school timetables automatically, handling teacher constraints, subject combinations, and multiple streams
- Designed to solve a real problem I had experienced firsthand as a teacher — manual timetabling is slow and error-prone

Data Analysis Portfolio

Personal Project | Python / Jupyter Notebook

- Conducted exploratory data analysis on real-world datasets and produced findings reports with visualizations using Pandas, NumPy, and Matplotlib

OTHER SKILLS

- Report writing — I have written daily field reports, weekly summaries, and academic documentation throughout my career
- Training and supervision — I have trained teaching staff, polling clerks, and field teams in different settings
- Stakeholder engagement — I am comfortable working with school administrators, community members, government officials, and programme teams
- Independent work — most of my field roles required me to manage my own time and priorities without someone checking in on me constantly

- Integrity with sensitive data — across all three areas of my career, handling personal information responsibly has been a core requirement

REFEREES

1. Tony Videnyi

Field Director - ONE ACRE FUND

tovidenyi@gmail.com

2. Rebecca Wanjiru

CEO - Roe Solutions ltd.
